

CISS240: Introduction to Programming
Quiz q0102

Name: _____

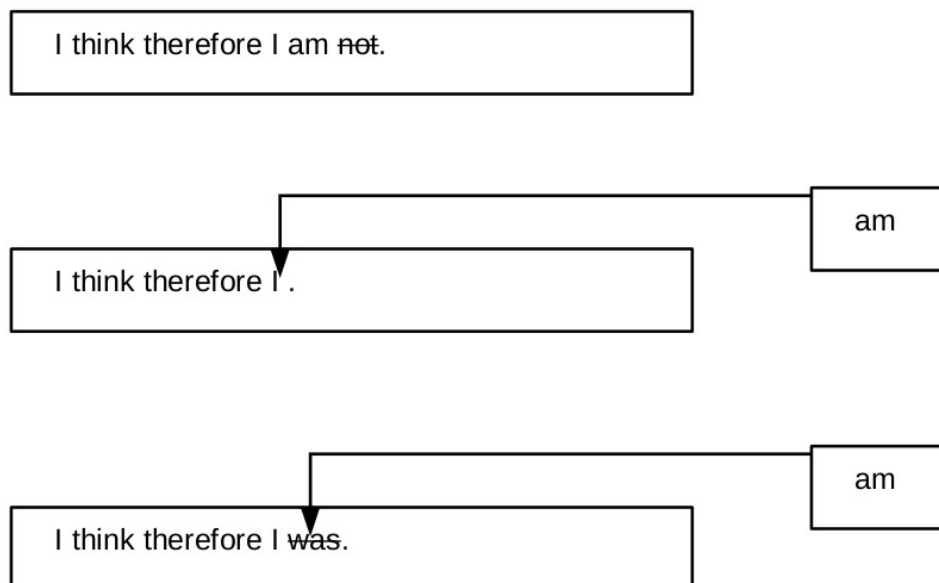

FOR SPRING2022: Because we are meeting virtually and also because the college has discouraged passing around printouts, open any text editor (example: notepad), write the corrected program named `main.cpp`, email `yliow@ccis.edu` using your college email account with subject line “`ciiss240 q0102`”, attach your `main.cpp`. You should NOT use your C++ compiler (MSVS, etc.) to test your `main.cpp`.

This is NOT an open book quiz. You have 3 minutes.

Q1. The goal is correct a C++ program by hand without the help of a C++ compiler software.

- To delete something: cross it out clearly.
- To insert something: draw a box, put whatever you want to insert into the box, and draw an arrow from the box to the point where you want to insert to go.
- To modify something: do a delete and an insert.

For instance

Write clearly and legibly. If I cannot read what you wrote, you will get zero.

TURN THE PAGE FOR THE PROGRAM TO CORRECT.

Correct the following program. The intended output is given below.

PROGRAM:

```
#include iostream

int Main()
(
    std::cout >> '2b or not 2b'

    return 0
)
```

INTENDED OUTPUT:

```
2b or not 2b
```

GRADING:

- Each correct deletion/insertion/modification is worth 1 point.
- Each incorrect deletion/insertion/modification is worth -1 point.
- Your total is normalized to 3 points. (I'm not telling you the total number of corrections.)
