

**CISS245: Advanced Programming
Quiz q2301**Name: jdoe5@cougars.ccis.eduScore:

Open `main.tex` and enter answers (look for `answercode`, `answerbox`, `answerlong`). Turn the page for detailed instructions. To rebuild and view pdf, in bash shell execute `make`. To build a gzip-tar file, in bash shell execute `make s` and you'll get `submit.tar.gz`.

Q1. T or F or M. When you change functions to inline functions, your program will always run faster than when you don't.

Q2. There are some problems with the following program below. For this question, fix the header file.

```
// File: main.cpp
#include "mylibrary.h"

int main()
{
    helloworld(); // call an inline function
    return 0;
}
```

```
// File: mylibrary.h
#ifndef MYLIBRARY_H
#define MYLIBRARY_H

inline void helloworld();
void f();

#endif
```

```
// File: mylibrary.cpp
#include "mylibrary.h"

void helloworld()
{
    std::cout << "hello world\n";
}

void goodbyeworld()
{
    std::cout << "goodbye world\n";
}
```

```
}

```

ANSWER:

```
// File: mylibrary.h
#ifndef MYLIBRARY_H
#define MYLIBRARY_H

inline void helloworld();
void f();

#endif

```

Q3. Refer to the previous question: Fix the cpp file.

ANSWER:

```
// File: mylibrary.cpp
#include "mylibrary.h"

void helloworld()
{
    std::cout << "hello world\n";
}

void goodbyeworld()
{
    std::cout << "goodbye world\n";
}

```

INSTRUCTIONS

In `main.tex` change the email address in

```
\renewcommand\AUTHOR{jdoe5@cougars.ccis.edu}
```

yours. In the bash shell, execute “`make`” to recompile `main.pdf`. Execute “`make v`” to view `main.pdf`. Execute “`make s`” to create `submit.tar.gz` for submission.

For each question, you’ll see boxes for you to fill. You write your answers in `main.tex` file. For small boxes, if you see

```
1 + 1 = \answerbox{}
```

you do this:

```
1 + 1 = \answerbox{2}
```

`answerbox` will also appear in “true/false” and “multiple-choice” questions.

For longer answers that needs typewriter font, if you see

```
Write a C++ statement that declares an integer variable name x.
\begin{answercode}
\end{answercode}
```

you do this:

```
Write a C++ statement that declares an integer variable name x.
\begin{answercode}
int x;
\end{answercode}
```

`answercode` will appear in questions asking for code, algorithm, and program output. In this case, indentation and spacing is significant. For program output, I do look at spaces and newlines.

For long answers (not in typewriter font) if you see

```
What is the color of the sky?
\begin{answerlong}
\end{answerlong}
```

you can write

```
What is the color of the sky?
\begin{answerlong}
The color of the sky is blue.
\end{answerlong}
```

For students beyond 245: You can put \LaTeX commands in `answerbox` and `answerlong`.

A question that begins with “T or F or M” requires you to identify whether it is true or false, or meaningless. “Meaningless” means something’s wrong with the statement and it is not well-defined. Something like “ $1+_2$ ” or “ $\{2\}^{\{3\}}$ ” is not well-defined. Therefore a question such as “Is $42 = 1+_2$ true or false?” or “Is $42 = \{2\}^{\{3\}}$ true or false?” does not make sense. “Is $P(42) = \{42\}$ true or false?” is meaningless because $P(X)$ is only defined if X is a set. For “Is $1 + 2 + 3$ true or false?”, “ $1 + 2 + 3$ ” is well-defined but as a “numerical expression”, not as a “proposition”, i.e., it cannot be true or false. Therefore “Is $1 + 2 + 3$ true or false?” is also not a well-defined question.

When writing results of computations, make sure it’s simplified. For instance write 2 instead of $1 + 1$. When you write down sets, if the answer is $\{1\}$, I do not want to see $\{1, 1\}$.

When writing a counterexample, always write the simplest.

Here are some examples (see `instructions.tex` for details):

1. T or F or M: $1 + 1 = 2$ T
2. T or F or M: $1 + 1 = 3$ F
3. T or F or M: $1+_2 =$ M

4. $1 + 2 =$ 3

5. Write a C++ statement to declare an integer variable named `x`.

`int x;`

6. Solve $x^2 - 1 = 0$.

Since $x^2 - 1 = (x - 1)(x + 1)$, $x^2 - 1 = 0$ implies $(x - 1)(x + 1) = 0$. Therefore $x - 1 = 0$ or $x = -1$. Hence $x = 1$ or $x = -1$.

7. Which is true? C

- (A) $1 + 1 = 0$
- (B) $1 + 1 = 1$
- (C) $1 + 1 = 2$
- (D) $1 + 1 = 3$
- (E) $1 + 1 = 4$
